

## EGG DONOR INFORMATION SHEET

*Thank you for your interest in our donor egg program.*

### Screening:

- Initial telephone survey completed.
- Call with Day 1 of menses to schedule Day 3 US, E2, FSH, and AMH. Donor Egg packet given.
- Appointment will be scheduled with psychologist. This will include an interview and MMPI. Plan 2 ½ to 3 hours for this appointment.
- Appointment scheduled with physician for history and physical, consents and FDA screening. Donor Egg intake scheduled with a nurse to review completed paper work and review process.
- There is no charge or compensation for all the above appointments.

### Egg Donor Treatment Process:

- The actual cycle consists of a series of injectable medications given over a 3 to 4 week period to stimulate egg growth. You will receive instruction to give these injections to yourself.
- Short office visits (approximately 5 to 15 minutes) every couple of days during the last week and a half will be scheduled for monitoring egg growth. An ultrasound and blood work will be done at these appointments. These will be scheduled from 8:30 – 10:30 am.
- The egg retrieval is scheduled for early in the AM, usually 7:30AM – 8:30 AM. You will be at the Center approximately 2 ½ - 3 hours. The procedure is a vaginal one so there is no incision. **You will have anesthesia during the procedure so you need to have someone drive you home. You are not allowed to drive that day.**
- You will be off work the day of the egg retrieval.
- A post-cycle appointment is scheduled after you call us with Day 1 of menses.

### Compensation:

Your compensation for a completed egg retrieval cycle will be \$5000. This will be given to you at your post-cycle appointment. This compensation is taxable income.
